

Dear Valued Customer

Another mild winter with little snow; what will this spring be like? As I enter my 32nd year in business, I have yet to figure out the weather. So, I have enclosed my tentative schedule for spring startups and fall shutdowns.

Along with the schedule for each city, I have enclosed a price list of each service. The pricing of services for 2017 will remain the same.

As a reminder, I am no longer offering aerating services. For aerations, you can contact MN Turf Care at 952-469-2202.

Again this year, I will try to make your life simpler. I will simply assume that the services I performed for you last year will be the same this year. If you want to change your services; please email me at **jmoody55317@earthlink.net** or call me at 952-448-5720.

During the spring startups, I will automatically do repairs that involve sprinkler heads and any repair that takes less than 10 minutes. For longer repairs, I will schedule a service call after spring startups are done (approximately after May 20th). Generally, there is no additional service call charge for these repairs (just time and material).

As in past, I will call 2-3 days ahead of time to schedule each service. I have enclosed **approximate** dates for spring startups and fall shutdowns by location. I rotate the dates of services for each city from year to year to be fair to all. Please **mark** on your calendars the approximate dates of each service.

You will find my contact info, prices, and schedule at ***jeffsprinklerservices.com***.

Please keep the enclosed price list for future references. If you want to change your services or have questions; please email me at **jmoody55317@earthlink.net** or call me at 952-448-5720.

Thank you from Jeff Moody
Jeff's Sprinkler Services Co

PS: You can cut your water bill by turning off your sprinkler clock when the weather is cool and damp (I only watered 9 days last year). Also, use your seasonal adjust or water budget (on your sprinkler controller) as the seasons change. Generally in Minnesota, a sprinkler system only needs to be used to supplement the rainfall from June 21 to September 15th.
